Scientists from NASA have published the results of a study on the possibility of detecting arrays of solar panels created by an advanced extraterrestrial civilization. The researchers concluded ...

NASA researched if future space telescopes could detect the use of widespread solar panels by alien civilizations in our galaxy.

Given their reflective properties, vast arrays of these solar panels would be distinguishable and potentially detectable by advanced observers like NASA, who are tirelessly ...

This isn't an act of vandalism, you understand, but rather a precursor to building an enormous solar power plant that surrounds its entire host star. What else would an ambitious alien ...

The Solar System is huge and mostly unexplored, and the probes could be very small. There could be probes everywhere: in craters on the Moon, or lurkers in the Asteroid Belt and Kuiper ...

A groundbreaking study, co-authored by researchers like Ravi Kopparapu and Jacob Haqq-Misra, delves into the fascinating possibility that NASA's next-generation space telescope, the Habitable ...

The largest spacecraft NASA has ever built for planetary exploration just got its "wings" -- massive solar arrays to power it on the journey to Jupiter's icy moon Europa.

Investigating the amount of solar radiation that would power Earth and the possibility of detecting extraterrestrial solar panels from a distance of light years

Solar arrays are critical components of spacecraft power systems, providing the energy needed for propulsion, communications, and mission operations. This post explores the structural ...
