---

This chapter elaborates on the advancements in communication technologies, the evolution of communication networks, and the edge computing landscape. Then, the chapter ...

To circumvent this constraint, the concept of edge computing has been considered. Edge computing, simply put, is where core network and cloud computing capabilities are moved to the ...

Co-designing telecom power systems with MEC improves energy efficiency, reduces latency, and supports scalable edge computing for real-time applications. Modular, weatherproof ...

Japanese manufacturers prioritize suppliers who offer reliable and scalable edge computing solutions. The emphasis is on quality, compatibility, and the ability to support future ...

Edge computing technology is changing the way data is processed and managed in the digital processing landscape, particularly within the communication industry.

On the target orbit plane, the plurality of satellites flying on the target orbit plane form a circular communication network. The present disclosure relates to communication satellite systems,...

In this paper, we discuss the architecture and principles of mobile edge computing (MEC) and edge caching in large-scale wireless networks. Moreover, we also discuss the necessity, ...

In our current project, we are developing hardware technologies that perform high-speed information transmission using new hardware that did not exist previously or that performs high-performance ...

In this paper, joint CCS is studied by considering 6G networks as the communication network. First, a typical architecture is provided to show the key components of joint CCS and their ...

# Edge computing communication using Japanese communication cabinets

As edge-intelligent communication systems are increasingly deployed in complex scenarios (e.g. unmanned aerial vehicles, UAVs) there is a growing demand for more efficient, secure...
