How far can an electric car go?

The ranges listed are EPA.gov estimates. These assume the electric car is fully charged and will be used for both city and highway driving. fueleconomy.gov is another source of this data. Electric cars have an average total range of 193 miles (310.5 km). The most common electric car range is 68 miles (109.4 km).

How do I find the range of my EV?

Making the most of an EV's range relies on efficient powertrain design and sensible driving practices. With our EV Range map, you can effortlessly discover the geographical radius your EV can travel on a full charge. All you have to do is add the zip and the vehicle's make, model, and trim; our tool will do the rest.

Does the EPA test EV range?

The EPA provides range estimates for every electric vehicle, but they don't test EV range in the real world -- and Edmunds does. Read all the latest real-world EV test results from the Edmunds experts.

What is the Edmunds EV range test?

We created the Edmunds EV Range Test as a way to compare estimates from the EPA and manufacturers with the results of actual driving in the real world. As with our instrumented track testing, we aim to be as thorough and consistent as possible in conducting the Edmunds EV Range Test.
