-----

Our portfolio of work will help integrate all sources of electricity better, improve the security of our nation's grid, solve challenges of energy storage and distributed generation, and provide a critical ...

Utility-scale renewable energy may require expanded transmission capabilities. As adoption of these innovations increases, so too will the need for modern grid technology to strengthen the grid, the ...

The Grid Modernization Initiative (GMI) works across the U.S. Department of Energy (DOE) to create the modern grid of the future. A modern grid must have: Greater RESILIENCE to hazards of all types ...

To ensure the grid of tomorrow is prepared to meet the demands of this transformation, NEMA has published a Roadmap for a Resilient and Innovative U.S. Electrical System to chart a ...

For years, the conversation around grid modernization has focused on what utilities should deploy: advanced metering, DERMS, ADMS, field mobility, analytics platforms--the list goes on. But ...

Grid modernization will require a suite of policy changes to support advancements in grid technologies, grid management, and utility regulation.

In our survey analysis, we identified four groups based on their grid modernization strategies, including demand flexibility, grid optimization, energy exchange, and smart assets.

Drawing on survey data and extensive industry experience, we have identified the industry's top grid modernization priorities, the top challenges and the strategies and tactics that can drive success.

This document summarizes an overarching grid modernization strategy, which serves as the foundation for future investments and coordination for grid modernization RDD& D at DOE.
