How long does a solar inverter warranty last?

That's why understanding your solar inverter warranty is so important. The SolarEdge inverter warranty covers string inverters for 12 years by default, with the option to extend coverage up to 20 or 25 years depending on the model. These inverter warranty periods help protect your investment by covering potential defects or premature failures.

Do inverters have extended warranties?

Some manufacturers offer extended warranties for an additional cost, but coverage varies. While a standard inverter warranty typically covers defects and failures, extended warranties may extend coverage for parts, but not always labor or service costs. Some manufacturers provide refurbished replacements instead of new units.

Does a string inverter have a warranty?

Most string inverters come with a 5- to 12-year warranty, though some manufacturers offer extended warranty options for added protection. Since a string inverter failure affects multiple solar panels at once, it can cause significant system downtime. Some warranties cover replacement costs, but labor and shipping fees may not always be included.

How do I get a warranty on an inverter?

Find your inverter warranty paperwork or check the manufacturer's website if it was registered online. Having your system details ready will speed up the process. If your original installer is still in business, they can help process your warranty claim. But if they've closed down, you'll need to reach out to the inverter manufacturer directly.

Q: Can I extend my Lobamba warranty? A: Yes, through authorized partners like EK SOLAR - typically adds 2-3 years coverage. Remember: Proper maintenance isn't an expense - it's insurance for your ...
