New data recently released by the Energy Information Administration (EIA) shows a decrease in wind power production in 2023. Despite record highs in installed wind capacity and ...

But over the last few years, the industry has taken hit after hit, with everything from broken contracts and canceled wind farms to rising inflationary costs and supply chain issues.

Over the last 5 years, a third of all wind projects have been cancelled, according to a January 2024 study by Berkeley Lab. Half of all projects have been delayed by more than 6 months.

Dozens of British wind farms run by some of Europe's largest energy companies have routinely overestimated how much power they'll produce, adding millions of pounds a year to ...

The U.S. Department of Energy today released three reports showing record growth in land-based wind energy, significant expansion of the pipeline for offshore wind projects, and ...

In a report published last week, Allianz Research noted that the eight largest renewable energy firms in the world reported a combined total \$3 billion decrease in assets in the first half of the...

Yet, it is hard to deny the momentum behind wind energy. According to the International Renewable Energy Agency, wind power is now cheaper than fossil fuels in all major markets.

In the U.S. electricity generation from wind energy went from less than 1% in 1990 to about 10.2% in 2022. In Europe the growth has been even more pronounced, propelled by financial ...

Enormous subsidies for solar and wind generation technologies are proving much more expensive than advertised. They also carry hidden costs and burdens on the grid, most recently seen ...

How much money has been lost in wind power generation

The cost of turning down wind turbines (curtailment) and replacing that lost energy (turn-up) is calculated using detailed data from the Elexon Insights API. For curtailment, the amount of lost wind energy is ...
