-----  
What is the solar distiller?

You can help us by expanding it. Learn how here. The Solar Distiller is a machine added by IndustrialCraft 2 that is used for processing Water into Distilled Water. Community content is available under CC BY-NC-SA unless otherwise noted.

What is distilled water in IndustrialCraft 2 experimental?

Distilled Water is a fluid from IndustrialCraft 2 Experimental. It can be created either in the Solar Distiller or the Condenser. The Solar Distiller only requires a direct path to the sky but is also very slow, generating only 1 mB of distilled water every few seconds.

How does a solar distiller work?

If you use a hopper/ejector upgrade/pulling upgrade, and you supply water via cells, the Solar Distiller will export both empty cells (from the left side, after draining the water) and distilled water cells. As its name implies, the Solar Distiller must have an open view to the sky directly above it during the daytime to operate.

Should I use distilled water instead of IC2 coolant?

Using 1 lapis dust (with distilled water) instead of 8 (with normal water) to make the coolant cells is definitely worth the effort IMO. IC2 Coolant is the only reason you'd be making distilled water, so basically they're one and the same thing. You're really not off base at all.

Distilled Water is a fluid from IndustrialCraft 2 Experimental. It can be created either in the Solar Distiller or the Condenser. The Solar Distiller only requires a direct path to the sky but is also very slow, ...

Distilled water is made by the solar distillation plant (or similar). Well, this is embarrassing. I'm actually building this whole thing to make distilled water for coolant cells. Tried attaching a pump to it, but that ...

When operational, it converts Water to Distilled Water at a rate of about 1 millibucket (mB) per 3.5 seconds, creating a full bucket of Distilled Water in about 1 real-life hour (6 in-game day cycles).

The Solar Distiller is a machine added by IndustrialCraft 2 that is used for processing Water into Distilled Water.

## Ic2 solar distillation generator

The Solar Distiller from IndustrialCraft 2 Experimental is used to make Distilled Water. A clear path to the sky is needed for the distiller to work and it produces 1 mB every few seconds. The distiller GUI has ...

Going that route I had enough coolant to give all my ic2 machines speed upgrades to get nearly 1 tick processing without even worrying about distillers. But I'm more about having things ready on demand ...

I built a stack - 64 - of solar distillers, and the amount of distilled water coming from them is awesome. Much better than my previous method of using Lava and Heat Exchangers and ...

Distilled Water can be obtained by two ways - using the Solar Distiller or using a Condenser. The Solar Distiller accepts up to 10 buckets of Water and will slowly transform it into ...

It is the most basic machine for electrical generation that can be upgraded. It can supply IC2 machines with electricity and charge tools and batteries in its GUI. Generators produce power by burning the ...
