How does the advanced 5G NTN satellite base station work?

In a live hardware-in-the-loop lab environment, the Advanced 5G NTN Satellite Base Station performed high-speed data transfers connecting with prototype NTN user equipment, compliant with 3GPP Release 17, an industry standard for improved radio flexibility and low latency.

Is North America setting the pace for 5G Innovation?

With a mature device market, strong operator investment, and an accelerating shift toward standalone architecture, North America continues to set the pace for 5G innovation.

What is 5G network equipment & infrastructure?

5G network equipment and infrastructure encompasses various components including core network, radio access network (RAN), and user equipment. User equipment is a term that describes 5G-capable smartphones, tablets, laptops, or other types of wireless devices used to access the network.

Is 5G a foundational infrastructure for Economic and digital transformation?

The result is a more grounded, more strategic view of 5G as a foundational infrastructure for economic and digital transformation. A Global Network Reaching Maturity Nowhere is 5G's momentum more clearly visible than in North America, where the technology has achieved some of the highest adoption rates in the world.

The North America 5G base station equipment market has witnessed significant growth driven by increased demand for high-speed wireless communication infrastructure.

As the demand for 5G base stations continues to grow, telecom operators, infrastructure providers, and technology companies are investing in expanding and upgrading the 5G infrastructure in North ...

To address this problem, NEC and Fujitsu have established test environments in the U.K. and North America, which are foreseen as upcoming O-RAN markets, as part of the above NEDO ...

5G technology is a critical pillar of U.S. national security, economic prosperity, and geopolitical influence in the twenty-first century.

North America Communication Network 5G Base Station Upgrade Project

As of early 2025, Ookla reports that U.S. 5G network performance has advanced notably, driven by 5G Standalone (SA) deployment. In Q4 2024, the U.S. reached a median 5G SA download speed of ...

In a live hardware-in-the-loop lab environment, the Advanced 5G NTN Satellite Base Station performed high-speed data transfers connecting with prototype NTN user equipment, ...

In this work we answer several questions about the environmental impact of 5G deployment, including: Can we reuse minerals from discarded 4G base stations to build 5G or does 5G require new ...

This continent databook contains high-level insights into North America 5g base station market from 2018 to 2030, including revenue numbers, major trends, and company profiles.

Explore how Ericsson is leading 5G innovation through strategic investments in the US and why spectrum policy shifts are key to upholding competitiveness.
