---

According to the prestressed cable photovoltaic support structure provided by the invention, the steel consumption and the foundation engineering amount are greatly reduced, the prestressed cable ...

In this paper, the mechanical behavior of a single-cable structure is introduced, and the simplified analytical formulations for internal force and displacement are deduced based on the ...

The prestress flexible photovoltaic fixing bracket has the advantages of simple structure, less upright posts and foundations, shortened construction period, reduced construction cost and...

In recent years, a flexible photovoltaic support, which uses prestressed cables to fix and support the photovoltaic module and which transmits the upper load to the foundation through a ...

To better understand the structural behavior and prevent potential failure, this study presents a simplified analytical model for the design of double-layer flexible cable photovoltaic ...

To study the structural response of prestressed double-layer cable flexible photovoltaic brackets under fluctuation wind loads, an analytical solution for cable horizontal tension without considering ...

The system is designed to meet the requirements of photovoltaic power generation applications for projects in the agricultural, fishing and animal farming sectors etc.

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support system is proposed ...

These flexible PV supports, characterized by their heightened sensitivity to wind loading, necessitate a thorough analysis of their static and dynamic responses.

**Abstract** The flexible support photovoltaic module structure system has advantages such as large span, fast

## Photovoltaic prestressed support

construction speed, and suitability for complex environments. However, this kind ...
