Vanuatu emitted 0.48 megatonnes of CO₂-equivalent in the latest year, a negligible share of the global total. At 1.5 tonnes per capita per year, emissions are rated low-above zero, but far ...

Vanuatu's NDC focuses on reducing greenhouse gas (GHG) emissions, enhancing resilience to climate change impacts, addressing loss and damage and fostering sustainable development.

By endorsing the CCAC Framework and its Strategy 2030, Vanuatu has committed to taking meaningful measures to reduce short-lived climate pollutants (SLCPs), specifically methane, black carbon, ...

The new NDC outlines key steps the country will work on over the next ten years, focusing on cutting down carbon emissions, strengthening resilience, and addressing the loss and ...

To reduce emissions and achieve increasing prosperity at the same time, we have to decouple economic growth from CO₂ emissions. Several countries have achieved this in recent years.

The premise of carbon cooperation in Vanuatu rests on the nation's status as a net carbon sink, absorbing more carbon dioxide than it produces, thus freely providing a critical environmental service ...

It has reduced carbon dioxide emissions by 5,827 kg by eliminating or reducing paperwork in the sanitary and phytosanitary (SPS) certificate application and cargo clearance ...

Vanuatu is already net negative emissions. Vanuatu's large forest area removes more than 10 times the greenhouse gas (GHG) emissions generated from human activity. Yet, Vanuatu's ...

cultures depend on limiting climate change and adapting to the change locked in. We have a responsibility to future generations. Vanuatu delivers this long term Low Emissions Development ...
