To the naked eye, the product looks just like regular glass, but with the unique ability to harnesses the power of the sun, which turns any building into an energy-generating solar array.

Solar control glass can be specified for any situation where excessive solar heat gain is likely to be an issue, eg. large facades, glass walkways, atria and conservatories.

As a vital link connecting the hospital's public buildings, the glass corridor faces key challenges in structural load-bearing, architectural aesthetics, and ease of installation--issues that Cando Solar's ...

Nicknamed "Colors of Humanity," the energy efficient building will be home to more than 250 employees. The building's spectacular facade combines pv glass in varying degrees of permeability to best ...

Discover what photovoltaic glass is, how it works, and how to integrate solar energy and automation into homes and businesses efficiently and sustainably.

Ever walked through a sunlit building corridor and thought, "This space could literally power itself"? That's exactly what photovoltaic corridor grille panels are making possible.

The fusion of aesthetics and sustainability is now a tangible reality. Mitrex Solar Glass stands at the forefront of this revolution, seamlessly blending cutting-edge photovoltaic technology ...

Shadovoltaic is a fixed or controllable external glazed solar shading system that may be installed either vertically or horizontally in front of the facade. Photovoltaic cells are integrated into the glass so as to ...

BIPV systems replace conventional building materials with solar photovoltaic glass, allowing buildings to generate clean and renewable energy.

That's the magic of photovoltaic (PV) glass tracks - a cutting-edge solution merging solar technology with

Solar Glass Corridor

architectural elements. Unlike traditional solar panels, these tracks integrate seamlessly into ...

Features and Benefits
PV Cells
Generic Types
Controllable Versus Fixed Fins and Control Routines
Design Service
A fixed solar shading system may only truly be effective on a south facing building. Controllable solar shading systems can better optimise the flows of heat and light energy than fixed solar shading systems. Since the louvres are designed to follow the path of the sun, daylight levels may be optimised whilst radiation levels are reduced to a minim...
