In a rush to add vast amounts of cheap renewables to their power systems, countries haven't been as quick to create regulations to help stabilize the grid and cut the risk of blackouts.

One farm family hopes to see a solar energy plant built on their land. But in some places, efforts to build utility-scale solar and wind farms are met with fierce opposition.

Many countries have made significant progress in integrating solar energy into their power generation, setting an example for others in terms of consumption and infrastructure development. In this article, ...

The most recent WEO, published in October, "shows solar overtaking nuclear, wind, hydro, gas and, finally, coal, to become the world's single-largest source of electricity by 2033," ...

"On a technology-neutral basis, wind and solar projects use disproportionate Federal lands relative to their energy generation when compared to other energy sources, like nuclear, gas, and...

Some countries are pulling off stunningly fast energy transitions, adding solar so rapidly, it's become a major source of electricity over the course of years -- not decades.

The European Parliament is committing to the European Union Carbon Border Adjustment Mechanism, a policy meant to prevent "carbon leakage," or companies moving production to countries where ...

The report calls on the world's richest countries to take the lead in turning away from polluting energy sources such as coal and oil and raise their share of renewables to around 20 per ...

The International Energy Agency (IEA) has scaled back its forecast for renewable power growth to 2030, citing weaker outlooks in the United States and China.

Solar power generation countries call a halt

New wind and solar power installations, and the cheap, clean energy they provide to America, may not survive the Trump administration.
