South Korea's new government expands offshore wind and solar, maintains nuclear, and phases out coal, yet risks persist with costly hydrogen ambitions.

The Ministry of Trade, Industry and Energy on July 31 announced that it will start construction of a next-generation power grid using domestic know-how. Shown is a solar power plant ...

Carbon-free energy sources, including nuclear power and renewable energies, will account for over 70 percent of Korea's annual power generation by 2038 under the new national ...

There is a growing trend towards decentralised electricity generation in South Korea, characterised by increased adoption of privately installed solar panels for electricity production and ...

PV capacity will likely decline further from 2022 to 2023. Higher interest rates have created obstacles for financing projects, as have reductions in feed-in tariffs and other policies supporting PV ...

South Korea installed 2.5 GW of new solar capacity in 2024, bringing its cumulative PV capacity to more than 29.5 GW, according to the Korean Energy Agency.

According to a government proposal published in 2022, South Korea plans to substantially increase its renewable energy capacity by the late next decade. The strategy aims to boost the share of ...

Wind power is expected to record highest growth rate of 20.56% by 2035, followed by solar PV with 5%. Other renewable energy sources such as biopower and hydro are estimated to ...

South Korea on Monday announced a new round of renewable energy bidding, aiming to boost wind and solar power generation while aligning projects with national priorities.
