The most common reason for turbines not spinning at times is because the wind is not blowing fast enough. Most wind turbines need a sustained wind speed of 9 MPH or higher to operate. ...

? Ever seen a wind turbine just standing still while others are spinning? You might think it's broken, but the real reason might surprise you!

The UK's first "motionless" wind energy system has been installed on a roof in Oxford. When we think of wind energy, wind turbines naturally spring to mind - elegant blades spinning to...

Bottom line: Wind turbines don't always spin--and in Texas, it's often not because the wind isn't blowing. Transmission constraints and grid congestion are preventing clean, low-cost wind ...

As of 2024, 12% of operational wind turbines experience unexpected rotation stoppages annually, costing the industry \$2.3 billion in lost energy production. Let's break down what's really ...

We dug around in some state, federal and industry reports and reached out to academic experts in energy technology to determine why some turbines in a wind farm spin while others ...

Wondering why some wind turbines aren't spinning? Discover the real reasons turbines stop or appear stationary, how they work, and what's normal. Get clear answers to common turbine ...

How Do Wind Turbines Work? Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan--wind turbines use wind to make electricity. Wind turns the propeller-like ...

Every wind turbine built to date imposes drag on the surface boundary layer of the wind, not on winds aloft. Even carpeting the Earth with similar turbines would not affect high altitude flows such as the jet ...

The wind turbines are like nothing is moving

The Indianapolis Star quoted John Hall, assistant professor in the Department of Mechanical and Aerospace Engineering, in a story on why some wind turbines spin at wind farms ...
