The study highlights the recent Clean Industrial Deal with new state aid rules and the Affordable Energy Action Plan as promising for driving energy storage deployments in Europe - ...

27.1 GWh of new battery capacity installed in 2025, marking the EU's 12th consecutive record year for battery storage deployment. 55% of all new capacity came from utility-scale systems, ...

By the end of the decade, storage is forecast to be deployed at a rate of 20 GW - 25 GW per year. This will come as a result of growth across all market segments. The strong growth of utility ...

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent ...

With storage capacity forecast to grow by a further 115% by 2030, this will play a crucial role in Europe's energy transition, creating more space for renewables on the grid. Since 2020, ...

By the end of the decade, storage will be deployed at a rate of 20-25GW per year, which is more than 20 times the rate of installation in the 2020s. Utility-scale energy storage to see strong growth, ...

The 2030 outlook foresees total energy storage capacity in Europe exceeding 160 GW, driven significantly by front-of-the-meter (FoM) installations. This segment experienced setbacks in ...

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the ...

TotalEnergies and Canadian Solar are boosting the future of energy storage in Europe with major projects in Germany and the UK. As the European Union accelerates its transition to ...

What is the prospect of new energy storage in Europe

Research institutions across Europe are developing next-generation storage technologies, including advanced flow batteries, compressed air energy storage, and hydrogen ...
