Offshore wind capacity expansion is expected to reach 140 GW over the forecast period, more than doubling the growth of the previous five-year period. The annual offshore wind market expands from ...

The addition of over 72 GW of new capacity globally demonstrates the sector's resilience and the trust that governments, investors, and communities continue to place in wind power as a ...

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

Cumulative installed wind energy capacity including both onshore and offshore wind sources, measured in gigawatts (GW).

Incorry's expects global wind power capacity will break the 1 TW mark sometime in 2023 and will eclipse the 2 TW range by 2030. This is less than the previous forecast of 2500 GW with the ...

Combined Wind and Solar is a graphical representation of estimated wind and solar power production amounts for the Current Operating Day and the Next Day.

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in ...

For the first time, the Report has conducted an annual forecast of global new energy generation capacity, noting that global wind power and photovoltaic generation capacity will increase ...

Choose your location on the map and fill out the form below to see a chart with wind power production for the chosen turbine model (this determines your capacity). You can view the current forecast as ...

See the projected growth of the wind industry over the next 35 years. All units are in gigawatts (GW). Only

Wind power generation capacity forecast

states with total capacity over 0.1 GW are included per year. Find out more about the data by ...
